

Intake Year Designated Area Analysis

This document sets out a breakdown of the number on roll for each mainstream school for the primary intake year R for the last three years.

This is data from School Admissions taken immediately prior to the commencement of the academic year.

The data is presented in tabular and graphical form and can be used to determine:

- Whether the intake year NOR have increased or reduced over the last 3 years
- How full the year groups are with pupils from the school's Designated Area
- From where else the intake NOR comes from

Schools are set out in order of Planning Area and within this in alphabetical order.

There are summaries for each planning area, and totals for all Primaries.

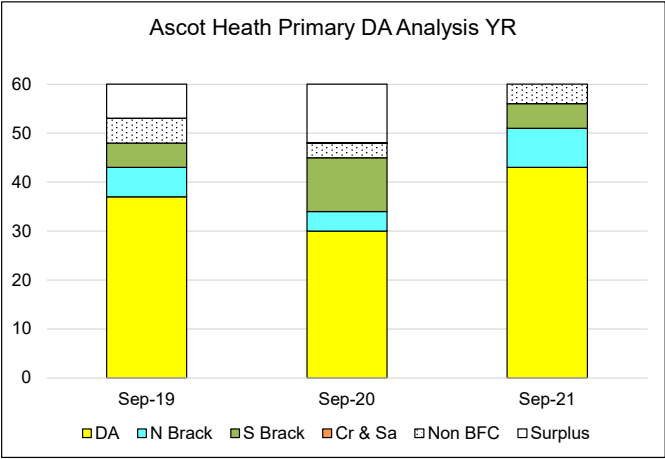

Commentaries are provided against some schools.
